CAREER OBJECTIVE

Computer Science (AI & Data Science) undergraduate seeking a Full-Stack Developer internship to apply hands-on experience with React, Flask, Node.js, and AI-integrated web applications. Built two end-to-end, AI-powered platforms spanning frontend, backend, REST APIs, and database design, with a strong foundation in OOP, data structures, and SQL. Looking to contribute to a fast-paced engineering team while continuing to grow as a full-stack and AI-driven developer.

EDUCATION

B.Tech, Computer Science & Engineering (AI & Data Science)

2023 – 2027

Parul University, Vadodara, Gujarat

TECHNICAL SKILLS

- Languages: C, Java, Python, JavaScript
- Frontend: HTML, CSS, JavaScript, React.js
- Backend: Flask, Node.js, Spring Boot, Hibernate, JDBC, REST API design
- Databases: MySQL, SQLite, MongoDB, Firebase, SQL
- AI & APIs: Google Gemini API, OpenAI API, NLP-based response generation
- Core Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms
- Tools & Platforms: GitHub, Docker, Windows, Linux, macOS, Unix

PROJECTS

StudyPlanner – AI-Powered Academic Assistant

React • HTML/CSS • Flask • Node.js • Gemini API • OpenAI API • Firebase • MongoDB

- Built a full-stack academic planning platform with a React frontend and a Flask/Node.js backend, integrating Gemini and OpenAI APIs to deliver personalized study support.
- Designed an end-to-end query pipeline: user input is processed by the backend, analyzed by the AI model, and converted via NLP into personalized study plans, summaries, and quizzes on the React interface.
- Implemented a recommendation engine that generates daily study schedules from subjects, deadlines, and topic difficulty, reducing manual planning effort for students.
- Used Firebase and MongoDB for user data and progress tracking, with adaptive reminders that keep students on pace across sessions.
- Enabled natural-language interaction so students can request schedule changes, summaries, or quizzes conversationally instead of using manual menus.

Student Grade Calculator – AI-Powered Academic Management Platform

React 18 • Flask (Python 3.11) • SQLite • Google Gemini 2.5-flash • Docker Compose

- Built a full-stack web platform to modernize student data management, academic performance tracking, and personalized learning support for educational institutions.
- Developed a React 18 frontend and a Flask (Python 3.11) REST backend with SQLite for fast, lightweight development and deployment.
- Integrated Google Gemini 2.5-flash to power AURIX, an in-app academic AI chatbot providing conversational assistance to students and teachers, with a custom markdown renderer for clean response formatting.
- Designed role-based dashboards for students, teachers, and administrators covering attendance analytics, assignments, performance monitoring, and timetable integration.
- Containerized the full application with Docker Compose, enabling single-command deployment across different environments.

CERTIFICATIONS

- HackerRank Certification — Problem Solving / SQL
- LIFE Global Certification
- SQL & Database Management — self-study via HackerRank and LeetCode
- Web Development Fundamentals — HTML, CSS, JavaScript, React (project-based learning)
- AI & Machine Learning concepts — explored through coursework and personal projects

SOFT SKILLS

Analytical Thinking • Problem Solving • Team Collaboration • Time Management • Quick Learner • Attention to Detail
